Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Novel fluorescent protein in in vitro assay for measuring protein kinase activity or dephosphorylation activity, or for measuring protein redistribution, has a green fluorescent protein with F64L and E222G mutation.

Claim 9; Page 37; 41pp; English.

```
CC The invention relates to a fluorescent protein derived from green fluorescent protein (GFP) or its analogue. The GFP containing mutations of at FetL and ES226 has a bigger compared to other GFP's making it very suitable for high throughput screening due to better resolution. The fluorescent protein is useful in invitro assays for measuring protein care activity, or for measuring protein care activity, or for measuring protein care activity, or for measuring protein care activity. The fluorescent protein is useful in studying cellular functions in living cells; as protein tags in transgenic animals, living and fixed cells; organelle tags, secretion marker and genetic reporter. The fluorescent protein is also useful as a cell or organsle integrity marker, a marker for changes in cell morphology, as transfection marker, and as a marker to be used in combination with fluorescence activated cell sorting (FACS). The novel proteins can also be used as reporters to monitor live or dead biomass of organisms, such as fungi. The fluorescent protein are correctly as markers in transcriptional and translational cuseful for screening promoters and for transcrands and chromosomes. The fluorescent protein are cuseful for screening promoters and for tagging plasmids and chromosomes. The fluorescent protein engineered into the genome of a phage is useful care changed and as a mortant colling chasigning diagnostic tool. The present sequence is a DNA encoding channer of for designing diagnostic tool. The present protein (GFP) mutant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   LVTALSYGVQCFSRYPDHMKQHDFFKSAMPEGYVQERTIFFKDDGNYKTRAEVKFEGDTL 120

The invention relates to a novel cell, comprising three heterologous conjugates (HC), a first HC (HC1) comprising an anchor protein that specifically binds to an internal structure within the cell conjugated to an interactor protein (IP) of type A, a second HC (HC2) comprising IP of type B conjugated to a first protein of interest conjugated to detectable group. The cell is useful for detecting if a compound disrupts or induces the interaction between two intracellular proteins. The cell is also useful for screening compounds that modulate the interaction between two intracellular group. The cell is also useful intracellular proteins. The proteins. The proteins compounds the interaction between two exemplification of the invention

The invention relates to determining, if a compound, is a dislocator of PDE4. The method comprises testing if the compound removes PDE4 spots, which may optionally be induced by a Rolipram-like reference compound, and testing if it inhibits the catalytic activity of the PDE4, where the compound is a dislocator of PDE4, if it removes PDE spots and if it does not inhibit the catalytic activity of PDE4. The method is useful for identifying compounds useful for the treatment of diseases of the central nervous system such as depression and for the treatment of inflammatory disease such as joint inflammation, Crohn's disease, inflammatory bowel compounds useful for the treatment of inflammatory bowel including asthma, chronic bronchitis, pulmonary disease candotoxic shock, toxic shock syndrome, systemic lupus erthematosis, psoriasis, bone resorption diseases, reperfusion injury, cancer and HIV including asthma affinity for the catalytic site on intracellular distribution of the PDE for the preparation of a medicament. The present carrier can minimize or reverse the effect of catalytic site on intracellular distribution of the PDE for the preparation of a HSPDE4A1-E222G fusion
                                                                                                                                           Determining if a compound is a dislocator of PDE4 for identifying compounds for treating CNS and inflammatory disease comprises identifying compounds which remove PDE4 spots.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            655 MVSKGEELFTGVVPILVELDGDVNGHKFSVSGEGEGDATYGKLTLKFICTTGKLPVPWPT 714

PDE4. The method comprises testing if the compound removes PDE4 spots, which may optionally be induced by a Rolipram-like reference compound, and testing if it inhibits the catalytic activity of the PDE4, where the compound is a dislocator of PDE4, if it removes PDE spots and if it does not inhibit the catalytic activity of PDE4. The method is useful for identifying compounds useful for the treatment of diseases of the central nervous system such as depression and for the treatment of inflammatory disease such as joint inflammation, Crohn's disease, inflammatory disease, respiratory disease, chronic obstructive pulmonary disease.

(COPD), including astima, chronic bronchtis, pulmonary disease, chock syndrome, systemic lupus erthematosis, psoriasis, bone resorption diseases, reperfusion injury, cancer and HIV infection. The use of a reagent that can mimic or reverse the effect of the compound with affinity for the catalytic site on intracellular distribution of the PDE for the preparation of a medicament. The present sequence represents the amino acid sequence of a HSPDE4A4-E223G fusion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            954 LVTTLSYGVQCFSRYPDHMKQHDPFKSAMPEGYVQERTIFFKDDGNYKTRAEVKPEGDTL 1013

the inversement protein (GFP) or the analogue. The GFP containing mutations at F64% and E222G has a bigger compared to other GFP's making it very suitable for high throughput screening due to better resolution. The fluorescent protein is useful in invitro assays for measuring protein kinase activity or dephosphorylation activity, or for measuring protein kinase activity or dephosphorylation activity, or for measuring protein cedistribution. The fluorescent protein is useful is studying cellular functions in living cells; as protein tags in transgenic animals, living and fixed cells; organelle tags, secretion marker and genetic reporter. The fluorescent protein is also useful as a cell or organelle integrity marker, a marker for changes in cell morphology, as transfection marker, and as a marker to be used in combination with fluorescence activated cell systing (FACS). The novel proteins can also be used as reporters to monitor live or dead biomass of organisms, such as fungi. The fluorescent protein is also useful as markers in transcriptional and translational correction for screening promoters and for tagging plasmids and chromosomes. The fluorescent protein are construction of the genome of a phage is useful for accepting promoters and for tagging plasmids and chromosomes. The invention relates to a fluorescent protein derived from

Sequence 239 AA;

for designing diagnostic tool. The present sequence is enhanced F64L jellyfish green fluorescent protein (GFP) mutant

ð,

The invention relates to systems, methods and reagents for cell-based screening or detection of compounds which affect particular biological functions. The methods of the invention utilise fluorescent biodetector molecules which, when acted on by a compound of interest, cause an ancient, when acted on by a compound of interest, cause an alteration in the cellular distribution of at least the fluorescent codety. In one embodiment, the biosensors comprise hear shock proteins (GFP) to derivatives thereof). Such biosensors are located in protein (GFP), or derivatives thereof). Such biosensors are located in another embodiment biodetector proteins can be used to detect protease activity. Such protease biodetector fusion proteins comprise one or more fluorescent proteins, a recognition signal which is cleaved by the protease; and at least one cellular localisation signal. The latter two components may be from heterologous sources. Due to the components of a single protein which is acted upon by the protease, or may be from heterologous sources. Due to the collocations signal, the biodetector protein is localised to a particular region of the cell. Once acted on by the protease of interest, the codinate to other locations within the cell. The presence of a second localisation signal attached to the fluorescent protein enables the fluorescent protein to be directed to a different cellular compartment after cleavage of the protease recognition sequence. The change in distribution of the fluorescent protein can be detected using imaging methods with a high degree of spatial resolution. The methods and Biodetector protein; fusion protein; recognition site; cellular targetting sequence; cellular localisation; fluorescent protein; protease activity detection; toxin detection; cellular stress detection; 181 DHYQQNTFIGDGPVLLPDNHYLSTQSALSKDPNEKRDHMVLLGFVTAAGITLGMDELYK 239 181 DHYQQNTPIGDGPVLLPDNHYLSTQSALSKDPNEKRDHWVLLEFVTAAGITLGMDELYK 239 cells Automated cell-based characterization of toxin by contacting cellicontaining luminescent reporter molecules with test substance and Enhanced green fluorescent protein (EGFP), SEQ ID NO:46. drug discovery; cell based screening. cellular activities and to screen compounds which modulate these activities. Biosensors containing a recognition site for caspase, for example, may be used for the screening of compounds which modulate apoptosis, while biosensors containing other protease recognition sites may be used for the detection of proteolytic toxins (such as anthrax lethal factor). The method provides improved target validation and candidate compound optimisation by combining many cell screening formats with fluorescence-based molecular reagents and computer-based feature extraction, data analysis and automation, resulting in increased quantity and speed of data collection and faster evaluation of drug candidates. Sequences AAB22881-B22885 represent fluorescent proteins which may used as components of biosensor fusion proteins of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     protein based on the Aguarda green fluorescent protein (GFP). The emission intensity changes as pH varies between 5 and 10 of the present protein are novel. The functional engineered fluorescent proteins show reversible changes in fluorescence over physiological pH ranges. They can also be used for determining the pH of samples and cells. The polymucleotides can also be used to produce transpent and cells. The polymucleotides pH sensors can be delivered to cells in the form of polymucleotides encoding the protein sensor fused to a targeting signal. The targeting signal directs the expression of the protein sensors to restricted cell locations. This makes it possible to measure the pH of a precisely defined cellular region or organelle
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                09
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9
                                                                                                                                                    New functional engineered green fluorescent proteins, used for measuring the pH in biological samples and cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DHYQQNTPIGDGPVLLPDNHYLSTQSALSKDPNEKRDHMVLLGFVTAAGITLGMDELYK 239
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DHYQQNTPIGGGPVLLPDNHYLSTQSALSKDPNEKRDHMVLLEFVTAAGITLGMDELYK 239

The present sequence is a fluorescnet protein used in the construction of a fluorescent protein indicator. The indicator comprises a sensor polypeptide that is responsive to a chemical, biological, electrical or physiological parameter, and a fluorescence protein functional group. The sensor polypeptide is operatively inserted into the fluorescent moiety. The fluorescent indicator is useful for detecting the presence of a response indicator and adetecting a change in fluorescence, in which a change is indicator and detecting a change in fluorescence, in which a change is indicative of the effect of the parameter on the sensor polypeptide. The movel fluorescent proteins are advantageous due to their reduced size as compared to the FRET (fluorescence resonance energy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       121 VNRIELKGIDFKEDGNILGHKLEYNYNSHNVYIMADKQKNGIKVNFKIRHNIEDGSVQLA 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ò
                                                                                                                                                                                                                                                    The present sequence is that of the EGFP signal domain, which can be included in novel recombinant protease biosensors (PBS) of the invention. The PBS (see AAY7953-8-54) comprise: a first domain (see AAY79579-87) comprising at least 1 detectable polypeptide signal such as the present sequence, a second domain (see AAY79588-622) comprising at least 1 reactant target sequence. A recombinant nucleic comprising at least 1 reactant target sequence. A recombinant nucleic acid (see AAAZ767-43) encoding the PB, an expression vector, and a genetically engineered host cell are also claimed. A claimed method for identifying compounds that modify protease activity in a cell involves contacting a host cell that possesses the recombinant PB with a test compound, and determining the PB distribution in the host cell, where compounds that modify protease activity in a host cell include the protease activity by the test compound. Claimed kits for identifying compounds that modify protease activity in a host cell include the recombinant nucleic acid, or the recombinant PB, or the vector, or the host cell. The PB is useful in high content screens to detect in vivo activation of enzymatic activity, and to identify specific activity based on cleavage of a known recognition motif
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         61 LVTALSYGVQCFSRYPDHMKQHDFFKSAMPEGYVQERTIFFKDDGNYKTRAEVKFEGDŢL 120

The specification describes a method for assessing the growth rate and death rate of a micro-organism within a predetermined time period in a desired environment. The method comprises introducing at least two reporter genes encoding luminescent and/or fluorescent products into the micro-organisms, incubating the micro-organism within the desired environment, and detecting luminescence and/or fluorescence after a predetermined time period. Use of two different markers within a micro-organism enables the differentiation between growth and death rates. The method is used to assess the growth rate and death rate of a microorganism within a predetermined time period in a desired environment. The present sequence represents a green fluorescent protein (GFP), and is encoded by a plasmid which encodes luminescent and fluorescent proteins, and is used in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   VNRIBLKGIDFKEDGNILGHKLEYNYNSHNVYIMADKQKNGIKVNFKIRHNIEDGSVQLA 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention provides melanin concentrating hormone (MCH) receptor (MCHR) chimeric and fusion proteins. The MCHR chimeric proteins comprise MCHR polypeptide regions from different species. The MCHR fusion protein comprise MCHR polypeptide region and a fluorescent polypeptide region and applyed of the MCHR polypeptide region and a fluorescent polypeptide region. The MCHR fusion proteins can be expressed by standard recombinant methodology. MCH action promotes feeding (orexigenic) and up regulation of MCH activity stimulates food intake. The present sequence represents a A. victoria green fluorescent protein (GFP) and a linker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         61 LVTALSYGVQCFSRYPDHMKQHDFFKSAMPEGYVQERTIFFKDDGNYKTRAEVKFEGDTL 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     121 VNRIELKGIDFKEDGNILGHKLEYNYNSHNVYIMADKQKNGIKVNFKIRHNIEDGSVQLA 180
                                                                                                                                                                                                                                                                            The invention relates to a gene encoding proteins having cyan-green fluorescence characteristic and having a function of showing stable fluorescence characteristic in acid region. A method for the preparation of a cyan-green fluorescent protein is provided which involves a transformant transformed by a recombinant vector comprising the gene, where the transformant is cultured and the protein is collected from the fluorescent protein (EGPP)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        LVTALSYGVQCFSRYPDHMKQHDFFKSAMPEGYVQERTIFFKDDGNYKTRAEVKFEGDTL 120

The invention describes methods of automated detection, classification
and identification comprising treating cells containing luminoscent
contained to the contain transport of locations with a test substance, where
contain the contain luminescent signals and converting optical information
control location to obtain luminescent signals and converting optical information
control digital data to interpret presence of toxins in the test substance.
The method are useful for detection of toxins into the test substance.
The method are useful for detection of toxins chosen from proteases, ADP-
ribosylating toxins, cytotoxic phospholipases, and exfoliative toxins.

Control of toxic threat agents. The first two levels of
chectors of toxic threat agents. The first two levels of
characterisation ensure a rapid readout of toxin class without
characterisation ensure a rapid readout of toxin class without
control of a protease biosensor related signal sequence used in the cell-based
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           61 LVTALSYGVQCFSRYPDHMKQHDFFKSAMPEGYVQERTIFFKDDGNYKTRAEVKFEGDTL 120

The invention relates to a method for mutagenesis that comprises synthesising a mutated strand and a complementary strand by use of synthesising a mutated strand and a complementary strand by use of comparimers. The method basically comprises a DNA synthesis in which one or more primers that have a nucleotide sequence containing at least one can take the prosphorylated 5'-terminus are annealed to a template DNA condition then subjected to an elongation reaction using a thermostable high-can didelity DNA polymerase, after which the phosphorylated 5'-terminus and then subjected to an elongation reaction using a thermostable DNA ligase to synthesise a circular DNA containing the primers; a digestion in which the stop of DNA synthesis is repeated several fines to amplify the DNA containing the primers and then, at least DNAs other than the amplified circular DNA are digested into several fragments obtained in the step of DNA synthesis in which, with the several fragments obtained in the step of digestion as megaprimers, the megaprimers are annealed to the circular DNA synthesised above, followed by an elongation reaction performed using the thermostable high-fidelity DNA polymerase. The method is useful for mutagenesis, particularly for introducing candom mutations at certain sites of the nucleotide sequence. The present method is simple, speedy, economical and widely applicable. The present method is simple, appear a victoria enhanced green fluorescent protein (GFP) used for mitagenesis in an exemplification of the invention. The EGFP is derived the contain the green fluorescent protein (GFP) sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                LVTALSYGVQCFSRYPDHMKQHDFPKSAMPEGYVQERTIFFKDDGNYKTRAEVKFEGDTL 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               61 LVITLIYGVQCFSRXPDHMKQHDFFKSAMPEGYVQERIIFFKDDGNYKTRAEVKFEGDTL 120

```
comprising a phosphorylation polypeptide and a fluorescent procein or in operative linkage, a donor molecule, a phosphorylatable domain, a phosphorylation bindicators of the invention and an acceptor molecule. The phosphorylation indicators of the invention are useful for detecting kinases or phosphatases in a biological sample. They are also useful in this throughput analysis e.g. for detecting a kinase inhibitor or phosphatase inhibitor. The present sequence is Aequorea victoria enhanced green fluorescent protein (EGFP) used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               120

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
of modified amino acid residues The chromophore, which is composed of modified amino acid residues The chromophore is formed upon of modified amino acid residues The chromophore is formed upon cyclication of the residues Ser-debydroTyy-Gly.

-!- BIOTECHNOLOGY: Has become a useful and ubiquitous tool for making chimeric proteins of GFP linked to other proteins where it functions as a fluorescent protein tag. GFP tolerates N-and C-terminal fusion to a broad variety of proteins. It has been expressed in bacteria, yeast, slime mold, plants, Drosophila, zebrafish, and in mammalian cells. As a noninvasive fluorescent marker in living cells, it allows for a wide range of applications where it may function as a cell lineage tracer, reporter of gene expression, or as a measure of protein-protein interactions.

Structural and spectral response of green fluorescent protein
Structural and spectral response of green fluorescent protein
Biochemistry 38:5296-5301(1999).

-!- FUNCTION: Energy-transfer acceptor. Its role is to transduce the
blue chemiluminescence of the protein aequorin into green
fluorescent light by energy transfer. Fluoresces in vivo upon
receiving energy from the Ca(2+)-activated photoprotein aequorin.
Abjorbs light maximally at 395 nm and exhibits a smaller
abjorbance peak at 470 nm. The fluorescence emission spectrum
peaks at 509 nm with a shoulder at 540 nm.
                 CRYSTALLOGRAPHY (2.5 ANGSTROMS) OF MUTANT WITH YELLOW EMMISSION

Bacteriol. 185:2330-2337(2003).
-!- CATALYTIC ACTIVITY: ATP + L-leucine + tRNA(Leu) = AMP +
diphosphate + L-leucyl-tRNA(Leu).
-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- SIMILARITY: Belongs to class-I aminoacyl-tRNA synthetase family.
                                                                                                                                                                                                                                                                                                                                                             "Complete genome sequence of a multiple drug resistant Salmonella enterica serovar Typhi CT18.";

"The C. elegans vitellogenin genes: short sequence repeats in the
promoter regions and homology to the vertebrate genes.";
Nucleic Acids Res. 13:528-5295(1985).
-!- FUNCTION: Precursor of the egg-yolk proteins that are sources of
nutrients during embryonic development (Potential).
-!- SUBCELLULAR LOCATION: Spreted in Caenorhabditis only by 32 cells
building the intestine of adult hermaphroditic individuals; they
are cotranslationally secreted into the body cavity and
subsequently taken up by the gonad.
-!- SIMILARITY: Contains 1 VWFD domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1 MVSKGEELFTGVVPILVELDGDVNGHKFSVSGEGEGDATYGKLTLKFICTTGKLPVPWPT
